## CFM 56 Blocker Door Overhaul

**Advantage Aviation Technologies specializes in aircraft welding repairs, aircraft overhauls, and engineering repairs for aircraft components and subcomponents.**

The Blocker Door is stripped, cleaned and bead blasted to ensure all paint and dust is removed.

AAT, through its state of the art FAA approved procedures, will then repair any surface metal defects, replace all hardware and seal strip. AAT repairs this damage with state of the art welding techniques and patented procedures that not only repair the damage and cracks but deter further cracking in the repaired areas. A Florescent Penetrate Inspection process is also implemented as part of the repair to ensure the highest quality.

The Blocker door is then Alodine coated to prevent future corrosion and repainted.

Normal repairs have 5 Day turn around. AOG Service is available next day in most cases, if necessary
